

PCOS & HORMONES.

THE IAAJ GUIDE SERIES

Why standard diets fail you, and what actually works instead.

FAT LOSS FOR THE HORMONAL BODY
FOUNDED 2017 · 5,000+ CLIENTS

SECTION 01

Your body plays by different rules.

Every diet you have tried was built for a body without PCOS. That is why they failed you. **It was never your discipline. It was the wrong approach.**

PCOS changes how your body handles food, stores fat, and responds to exercise. Eat less and train harder, the standard advice, and you often make the hormones worse, not better.

The good news is simple. Once you work with your hormones instead of against them, fat loss stops being a fight. This guide shows you how.

"You were never the problem. You were just given the wrong plan."

SECTION 02

Why PCOS is becoming PMOS.

You may start to hear a new name, **PMOS**, Polycystic Metabolic Syndrome. Here is why the change matters to you.

The old name put all the focus on cysts on the ovaries. But for most women the cysts were never the real problem, and many with the condition don't even have them.

The truth is this is a **metabolic and hormonal condition**, driven by insulin, blood sugar, and how your whole body handles energy. The new name finally points at the real cause.

The old name misled everyone

It focused on cysts, not the hormones and metabolism actually driving it.

It's about metabolism

Insulin and blood sugar sit at the centre. That is where real change begins.

SECTION 03

More than just weight.

It shows up in ways most plans ignore. If these feel familiar, you are not imagining it.

Irregular cycles

Periods that are late, unpredictable, or missing altogether.

Relentless cravings

Strong pulls toward sugar and carbs that willpower alone can't beat.

Fatigue and brain fog

Tired despite sleep, foggy despite trying. Your energy runs on empty.

Skin and hair changes

Acne, unwanted hair, or thinning, all signs of the shift underneath.

Mood swings

The hormonal rollercoaster affects how you feel, not just how you look.

SECTION 04

The four hormones that matter.

You don't need to fix everything. You need to move these four levers, gently and consistently.

Insulin

The big one. Steady blood sugar and the body finally releases fat. Start here.

Cortisol

Your stress hormone. Too much keeps fat locked in, especially around the middle.

Thyroid

Sets your metabolic pace. Often quietly underactive. Worth testing with your doctor.

Sleep hormones

Poor sleep worsens every other hormone. Recovery is not optional.

SECTION 05

How to eat for a hormonal body.

Not less food. Smarter food. These four principles do the heavy lifting.

Anchor every meal with protein

It steadies blood sugar and kills cravings. The foundation of everything.

Choose slow, low-GI carbs

Whole grains, legumes, vegetables. Never carbs on their own.

Eat at regular times

Steady meal timing keeps insulin calm. Skipping meals backfires.

Never crash diet

Aggressive cuts spike cortisol and stall fat loss. Eat enough to heal.

A hormonal body doesn't need less fuel. It needs the right fuel, at the right time.

SECTION 06

Move in a way that helps.

With a hormonal body, more exercise is not better. The right kind matters more than the amount.

WHAT BACKFIRES

Hours of intense cardio

Training to exhaustion daily

Exercising on no fuel

Punishing yourself for eating

WHAT WORKS

Strength training, 2 to 4 times a week

Daily walks, especially after meals

Rest days that actually rest

Movement you can sustain for life

Over-training raises cortisol, which raises insulin, which stores fat. Strength and walking do the opposite. Work smarter, not harder.

WHERE TO FROM HERE

This is a journey, not a quick fix.

PCOS is not cured in a week. But it can be managed, gently and steadily, until fat loss feels natural again. Thousands of women have done it. So can you.

You now understand more than most. Start with one lever, insulin, and let the small changes build. Your body has been waiting for the right approach, not more punishment.

And if you ever want a plan built around your body, we're here when you're ready.

This guide is for education and lifestyle support, not medical advice. PCOS and related conditions should be diagnosed and monitored by your doctor. Always consult a qualified professional before making major changes, especially if you are on medication.
